

TABLE OF CONTENT

S.I NO	TITLE	PAGE NUMBER
1.	INTRODUCTION	10
1.1.	Importance of Urban Wetlands	10
1.2.	Thread and Challenges(runoff,pollution, encroachment)	10
1.3.	Need for real time monitoring	10
2.	Literature review	12
2.1.	Continuous data collection	12
2.2.	Early warning for Ecosystem stress	12
2.3.	Support for planning and Ecosystem	13
2.4.	Public awareness and policy-making	13
3.	Parameters	14
3.1.	Water Quality: Temperature,ph,D0,E C/Salinity,Turbidity,Nutrients(Nitrate)	14
3.2.	Hydrological:Water level,Flow rate,Rainfall	14
3.3.	Environmental:Air temp& humidity,CO2,,CH4	14
3.4.	Ecological:Algal bloom,Vegetation Cover,Biodiversity indicators	14
4.	System Design	14
4.1.	Sensor selection & Calibration	14

4.2.	NodeMCU/ESP8266 or ESP32 setup	15
4.3.	Power(solar/battery)	16
4.4.	Data transmission(Wi-Fi,LoRa,GS M,NB-IOT)	17
5.	Data Management	18
5.1.	Cloud Platforms(ThingSpeak,FireBase,AWS,Azure,IoT,Blynk)	18
5.2.	Real-time dashboards	20
5.3.	Data storage & Visualisation	20
5.4.	Mobile/Web app alerts	21
6.	Applications	32
6.1.	Flood Management & prediction	33
6.2.	Pollution Control and Enforcement	33
6.3.	Biodiversity conservation	34
6.4.	Climate Change Adaptation	34
6.5.	Smart City Integration	34
7.	Future Scope	43
7.1.	Citizen science apps	43
7.2.	GIS & satellite Integration	44
7.3.	AI-Based Predictive apps	44
7.4.	Machine learning for anomaly detection	
8.	Challenges and limitations	55

8.1.	Sensor fouling & maintenance	55
8.2.	Data reliability and calibration	55
8.3.	Connectivity issues	56
8.4.	Cost and Scalability	
9.	Appendices	57
10.	References	63
11.	Summary	67
12.	Conclusion	68
12.1.	Path to sustainable wetlands	68
